For each 1 mmol of phosphate, ~1.5 mEq of potassium will be administered.

Therefore, if ordering 30 mmol of potassium phosphate, the patient will receive ~45 mEq of potassium. With orders for IV phosphate, there is considerable confusion associated with the use of millimoles (mmol) versus milliequivalents

phosphate contains 4.4 milliequivalents (mEq) of potassium and 3 millimoles (mmol) of phosphate. The solution contains a mixture of both potassium phosphate monobasic (KH_2PO_4) and potassium phosphate dibasic (K_2HPO_4). The different concentrations of the ions is a source of potential medication error.

Solution Of

Potassium

Potassium Phosphate Monobasic solution is a convenient stock solution for making phosphate buffers.

Widely used in molecular biology, biochemistry, and chromatography.

Potassium phosphate occurs in several forms: monobasic (KH_2PO_4), dibasic (K_2HPO_4), and tribasic (K_3PO_4).
