If your app supports Android 3.1 (API level 12) or lower, you need to use the legacy size qualifiers in addition to the smallest/available width qualifiers from above. From the example above, if you want a two pane layout on larger devices you need to use the "large" configuration qualifier to support version 3.1 and lower.

Support different screen sizes | Android Developers

Layouts Part of Android Jetpack. A layout defines the structure for a user interface in your app, such as in an activity.All elements in the layout are built using a hierarchy of View and ViewGroup objects. A View usually draws something the user can see and interact with. Whereas a ViewGroup is an invisible container that defines the layout structure for View and other ViewGroup objects, as ...

Let's explore some best practices in designing and developing Android apps. For starters, when you develop an Android application, you should prepare it to be run on a wide variety of devices and circumstances. Every Android device is a family in itself. When one member of the family goes haywire, it means the rest of the family is also likely to be affected.
