The word Machine Learning was first coined by Arthur Samuel in 1959. The definition of machine learning can be defined as that machine learning gives computers the ability to learn without being explicitly programmed. Also in 1997, Tom Mitchell defined machine learning that "A computer program is said to learn from experience E with respect to some task T and some performance measure P , if ...

Introduction to Machine Learning in R - GeeksforGeeks

The focus of this module is to introduce the concepts of machine learning with as little mathematics as possible. We will introduce basic concepts in machine learning, including logistic regression, a simple but widely employed machine learning (ML) method. Also covered is multilayered perceptron (MLP), a fundamental neural network.

Introduction to Machine Learning | Coursera

Machine learning identifies patterns using statistical learning and computers by unearthing boundaries in data sets. You can use it to make predictions. One method for making predictions is called a decision trees, which uses a series of if-then statements to identify boundaries and define patterns in the data.
