A pneumatic sensing edge is a pressurized air chamber (the gum hose) which fits inside the existing bottom seal of your door. When the pressurized chamber makes contact with an obstruction, the displaced air is sent to the air switch which is connected to the operator. The air switch then sends a signal through coil cord to the operator.

Safety Edges. Safety Edges are "contact" devices that operate when touched using pressure sensitive sensors. If an obstacle is encountered, the device signals the gate opener to stop and/or reverse operations. These devices are sold by the foot with 4', 5', and 6' versions typically carried in stock. Safety edges can be placed on fixed surfaces such as posts, or the can be installed on the edge of a gate depending on your needs.

Safety Edges & Sensing Devices, Sensing Edge, Treadle ...

These pressure-sensitive safety contact edges are designed for use on edges of guards and gates at possible crushing or shearing points. The safety edges signal the power source to shut down when tripped. When used on gates, machines, and handling equipment, the strips help to protect both personnel and machinery. Brands.

Safety Contact Edges - Grainger Industrial Supply

What is a Sensing Edge? A Sensing Edge is a touch sensitive switch that sends a signal to start, stop or reverse a motor or even to ring a bell. Since they typically operate on 24 volts, the possibilities for applications are endless. Where can Sensing Edges be used? Anywhere that you want a simple touch to send a signal! Common applications ...

Sensing Edges - Miller Edge
