Abstract. A software program can be viewed as a mapping from an input domain to an output domain, as shown in Figure 8.1. Suppose there are m input variables, X_1, X_2, \dots, X_m , driving software of concern, then the behavior of X_1, X_2, \dots, X_m , makes up the so-called software operational profile (SOP).SOP identifies what values the input variables may take, when the input variables may take a ...
