The presentation covers the different aspects of machines including unwinds, rewinds and point-to-point applications. It also looks at the different methods of control be it either speed or torque. Lastly we will explore the different types of tension systems including: manual, open loop and closed loop. We will discuss different components

### Basics of Web Tension Control Summary

This paper conducts the mechanical analy- sis for the unwinding roller and tension measuring roller of the cylindrical winding machine so that gets the mechanical model, gives error compensation formula caused by the radius change of the yarn group in the unwinding side designs the closed, -loop control system and utilizes the dy- namical-integral PID control strategy to achieve the tension control during the process of the cy- lindrical winding.
